

Atish Kumar

Backend-Focused Full Stack Developer (Django + React) | Building Scalable, High-Performance Platforms

Panvel, Navi Mumbai.
+91 8652012693
atish98.dev@gmail.com

SUMMARY

Software developer with 4+ years of experience in Django, React, and REST APIs, building secure and scalable applications across fintech and business domains. Focused on performance optimization, clean architecture, and efficient team collaboration.

EXPERIENCE

Tata Institute of Social Sciences, Mumbai.

Software Developer

Sep 2023 - PRESENT

- Designed and implemented core backend modules using Django for fee mapping, grade calculation, grade card generation, and room scheduling within the Student Management System (SMS).
- Developed scalable REST APIs using Django REST Framework to enable seamless integration between portals and frontend clients, significantly enhancing performance and maintainability.
- Integrated SBIEpay payment gateway into both the student fee portal and donation system, ensuring secure and reliable transaction processing.
- Optimized backend logic and database queries, contributing to a 35% improvement in page load times and enhanced user experience by 25%.
- Led full-stack architecture and deployment for internal applications such as Multiple websites, ensuring high traffic capacity and robust backend logic. With Content Management System.

Key Projects :

Student Management System (SMS)

- Engineered backend features using Django ORM and PostgreSQL for fee automation, result processing, grade card PDF generation, and academic

SKILLS

- **Backend:** Python, Django, Django REST Framework
- **Frontend:** React, JavaScript, HTML5, CSS3, Bootstrap, Tailwind, FIGMA.
- **Databases:** PostgreSQL, MySQL.
- **DevOps:** Docker, Nginx, AWS (EC2), Gunicorn
- **Tools:** Git, Linux

Projects

- **Hangman Game Project :** REACT+DJANGO+Docker
<https://github.com/Atishkumar98-Dev/Audacix-Hangman-Excercise>
- **BREAKROOM POS :** Django
<https://github.com/Atishkumar98-Dev/Breakroom>
- **Smart PDF AI Training :**
https://github.com/Atishkumar98-Dev/SMART_PDF_AI/blob/master/app.py
- **Food Ecommerce :** Django , Docker, REACT-Native APP, DJANGO REST FRAMEWORK. Nginx, AWS (EC2), Gunicorn.
<https://github.com/Atishkumar98-Dev/Foodly>
- **Portfolio :** With Figma Make, Vercel, React, Vite JS
<https://react-portfolio-rho-puce.vercel.app/>

scheduling

- Developed modules including bulk caution fee upload (refunds), admission cancellation, and student ID card generation with photo and signature
- Integrated CBCS grading system with existing marks module for streamlined academic evaluation
- Built ABC (Academic Bank of Credits) module enabling data export for National Academic Depository (NAD) portal compliance
- Implemented room scheduling system for faculty and students, optimizing classroom allocation
- Integrated SBlePay and configured CRON jobs for reliable payment status updates
- Optimized key components such as No Dues processing and consolidated reporting for improved performance
- Provided ongoing production support, debugging data issues from bulk uploads and user operations

Admission Portal

- Developed backend for full-cycle student admissions using Django REST Framework (DRF)
- Enabled real-time synchronization of applicant data with the central SMS database
- Designed scalable APIs for application processing, validation, and status tracking

Donation & Invoice Portal

- Built secure backend systems for public donations using Django
- Implemented automated invoice generation, audit logging, and staff management dashboards
- Integrated SBlePay, reducing manual effort and improving financial tracking accuracy

Multi-Site Platform Development

- Developed and maintained multiple institutional websites (cecsr, prayas, tissglobal, viksit-bharat, visitors-reflection) under Tata Institute of Social Sciences
- Implemented Google Workspace-based authentication (TISS domain login) with role-based redirection to CMS dashboards
- Built interactive features such as visitor reflection system with text input and drawing (scribble) support
- Enabled centralized content management through custom admin modules Student Management System (SMS):
Engineered backend features for fee structure automation, result processing, grade card PDF generation, and dynamic academic scheduling using Django ORM and PostgreSQL.
- Donation & Invoice Portal:
Built a secure backend system for public donations with auto-generated invoices, audit logging, and staff management dashboard — reducing manual effort and errors by 40%.
- Admission Portal:

CORE Competencies

- Full-Stack Web Development.
- Cross-Functional Team Collaboration.
- Performance Optimization.
- Code Quality Assurance.
- Problem Solving.
- Process Improvement.

EDUCATION

DR. D.Y. PATIL, VIDYAPEETH PUNE.

Pune (Distance Learning) *MBA(IT Management)*

July 2020 - Aug 2022

Certified Project: Created banking solutions web applications hosted on Heroku.

ST. WILFRED EDUCATION SOCIETY, Shedung, Panvel.

Bachelor in Computer Science

April 2017 - May 2020

Developed the backend for a full-cycle student admission process, using Django REST FRAMEWORK (DRF) APIs to sync real-time applicant data with the central SMS database.

- Multiple Sites: cecsr.tiss.ac.in , prayas.tiss.ac.in , tissglobal.tiss.ac.in, viksit-bharat.tiss.ac.in , visitors-reflection.tiss.ac.in. Created this Site most of the site with Google Auth Login with TISS Domain redirected to the Content Management Dashboard. Visitor's Reflection Site with Text Detection with Scribble and note.

Tata Institute of Social Sciences, Mumbai.

Jr. Software Developer

Aug 2022 - Sep 2023

- Contributed to backend development and maintenance of Django-based web applications by implementing new features, optimizing existing modules, and resolving performance bottlenecks.
- Debugged and fixed critical backend issues in production environments, improving application reliability and load performance.
- Integrated SBIEpay payment gateway into the donation system, ensuring secure and seamless transactions for donors and real-time invoice generation for staff.

Key Projects :

Invoice & Donation Portal

- Developed and maintained backend systems for the donation platform of Tata Institute of Social Sciences using Django
- Integrated SBIEPay for secure online payment processing
- Implemented automated invoice generation and transaction tracking logic
- Resolved critical production issues, improving system reliability and financial data accuracy
- Reduced manual intervention in donation processing through backend automation

Website Backend (Content Management System)

- Developed and maintained backend systems for institutional websites (tiss.edu, admissions portal) using Django
- Built multiple custom admin panel modules enabling departments and secretariat teams to independently manage website content
- Designed role-based access control (RBAC) for secure and structured content management across departments
- Streamlined content workflows, reducing dependency on technical teams for routine updates
- Supported deployment, monitoring, and maintenance of high-traffic production systems

Nettech Solutions Pvt. LTD. Rabale, Navi Mumbai.

Software Engineer

Jun 2021 - Aug 2022

- Developed, tested, and deployed web applications using Django, focusing on data integrity, user verification workflows, and secure integration with third-party services
- Built responsive and user-friendly interfaces while optimizing backend performance through efficient Django views and database models
- Managed deployment of application releases to client servers, ensuring smooth go-live processes with minimal downtime and adherence to banking compliance standards
- Provided CMS training and backend support to client teams, improving system adoption and reducing operational support requests

Key Projects / Banking & Fintech Application Development:

Banking / Fintech Web Application

- Developed a secure banking-style web application using Django and PostgreSQL
- Implemented authentication, role-based access control, and session management
- Designed modules for account management, transaction tracking, and balance handling
- Built RESTful APIs for frontend and mobile integration
- Applied security best practices including CSRF protection, password hashing, and input validation
- Containerized the application using Docker for scalable deployment

UMAC & CKYC Verification Portals

- Developed multi-step dynamic forms for customer verification workflows
- Integrated with CERSAI portal for automated data synchronization
- Improved compliance processes and reduced manual workload through workflow automation

Banking Deployments & Releases

- Contributed to Omni-channel banking platform deployments across multiple releases
- Performed unit testing and validation to ensure stable production rollouts
- Supported deployments for regional banks including Sindhudurg Bank, Thiruvalla Bank, and Hanumanta Bank

Internal Banking Systems & Integrations

- Developed internal admin portals for banking operations teams
- Built APIs for fintech integrations including payment workflows and KYC services

- Contributed to backend systems supporting mobile banking applications
